

Press Release

ChromaCon and its partner H&E open a new training center in Beijing.

Zurich/Beijing, October 27, 2017.

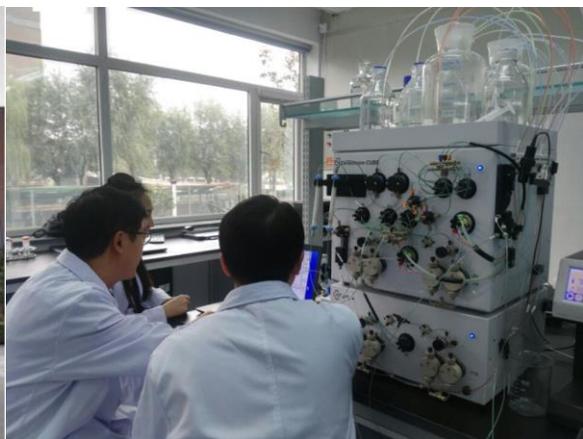

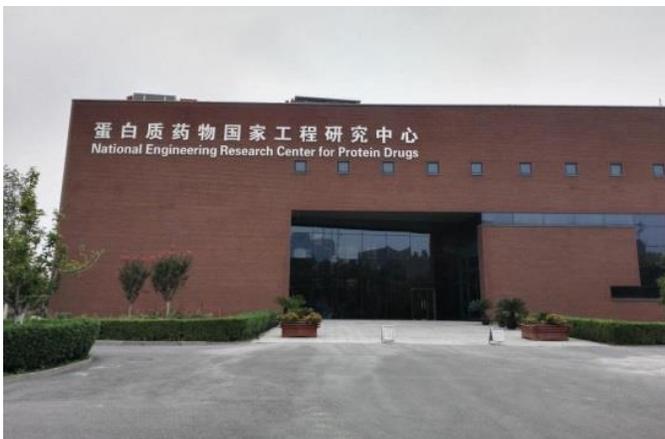

ChromaCon has established a strong presence in China having distribution partners in Beijing (H&E) and Shanghai (ES Technologies) and a business development desk in Shanghai.

We are proud to announce that we have established a training center for automated and continuous chromatography at the Chinese National Engineering Research Center for Protein Drugs in Beijing (see below for pictures).

The training center will be operated by H&E and institute staff. It will provide modular training courses in automated batch and continuous chromatography processes with Contichrom® equipment. The institute held already two very successful training courses this year with attendants from industry and academia.

Continuous biopharmaceutical manufacturing linking upstream and downstream processes can lead to significant productivity improvements. Key technologies for implementing such continuous processes have to be synchronized. ChromaCon intends to present its Contichrom® CUBE FPLC systems with the ability to link these modular units to build a fully continuous downstream processing train under a single synchronized process control. The technology leads to productivity increases of more than 80-fold, compared to standard single column mAb platform processes.

Contichrom® Discovery FPLCs allow the fully automated multi-step purification of antibodies and tagged proteins.

About ChromaCon AG

ChromaCon AG is a private Life Science Tool company located in Zürich, Switzerland, providing best-in-class process solutions to the biopharmaceutical industry. ChromaCon has developed and patented novel process principles, process control, equipment designs and operating software for batch, cyclic and continuous chromatography, providing significant CAPEX and OPEX cost savings and enabling scalable chromatographic solutions for large scale purification applications. The Contichrom® laboratory-scale equipment is co-marketed worldwide by ChromaCon and its partners. ChromaCon has provided global licenses for its process technologies to LEWA for implementation into scale-up systems. ChromaCon also develops and markets affinity purification solutions for column and membrane chromatography applications and tools for site-specific protein conjugation.
